

JULY 2010 OFFER SHEET

Here are a couple of alternative/additional minerals we currently have available if you'd like to have one. We picked out some exceptional specimens with you in mind! As always, shipping is free in the U.S., and photos are about life-size to give you an accurate idea of their size. And we'll send you our corresponding write-up to go with any minerals we've featured in the past.

Hematite Iron Roses, Ouro Preto, Minas Gerais, Brazil. June 2002 was an outstanding month, when we featured Hematite in the unusual crystal habit known as an "Iron Rose," from Ouro Preto, Minas Gerais, Brazil, as seen in the photo in Figure 1. We contacted our original Brazilian source in order to see another lot and picked out a few choice pieces to offer you!

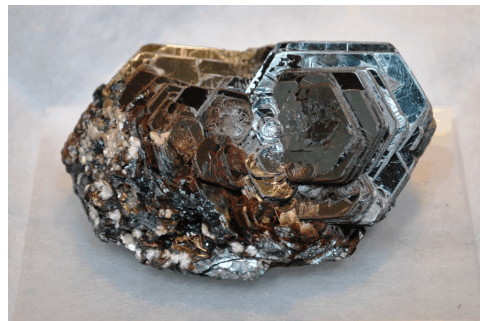

Figure 1. Hematite "Iron Rose" about 2.25" across \$120

We have eight thumbnail specimens, each mounted in our PB100 plastic cases for display and protection. They are available for \$10 and \$12.50. Larger specimens about 1.5" to 1.75" across are available for \$30, \$36, and \$50, while the biggest and best, 2.25" to 3" across, are available for \$120 and \$150.

Hydroxyl-Herderite, Lavra do Jaime, Linopolis District, Divino das Laranjeiras, Minas Gerais, Brazil. We had special requests for this rare mineral and were happy to pick up a few pieces to offer you:

Figure 2. Hydroxyl-Herderite crystals on matrix about 2.25" across for \$90.

Matrix specimens with twinned crystals, including the specimen in the photo, on matrix about 1.75" to 2.25" across for \$70 and \$90

Matrix specimen about 3" across with hydroxyl-herderite, muscovite, and very small crystals of apatite-(CaOH) for \$150

MARVELOUS MINERALS FROM PRIOR YEARS!

Eudialyte, Kipawa Complex, Villidieu Township, Quebec, Canada, our April 2002 featured mineral. Most likely, there won't be too many more opportunities to obtain these pretty specimens of this rare and lovely red mineral! We picked out a small lot in Tucson and have pieces about 3" by 2" for \$26.50 and slightly larger for \$30 and \$35. Eudialyte is a rock-forming mineral, so each piece contain other associated minerals, some of which fluoresce, and the accompanying write-up will assist you in identifying them.

Pyrite, Victoria Mine, Navajun, La Rioja, Spain, our March 1996/March 2006 featured mineral. We have so many exceptional pieces we're having a hard time grouping them and deciding which to photograph to offer to you! We'll do our utmost to let you know by next month.

But we do have a few of the smaller pieces left-- Choose any of the following for \$8 each: .5" cube on 1.25" by 1.25" matrix; pair of twinned cubes sans matrix, about 1" across; or large single cube about 1" by 1" by 1" without matrix; or better yet, one of each for \$22! We can supply these in larger quantities as special prices, so let us know if you're interested.

Pyrite from Spain.

Figure 3. Eudialyte with associated minerals from Quebec, Canada.

We also have some great specimens left over from last month's Offer sheet, which you can view on our by following this link:
